Novel human uridine kinase polypeptides useful for treating cancers, and to identify agonists and antagonists of the polypeptide useful for treating conditions associated with uridine kinase imbalance -

Claim 5; Page 22-23; 31pp; English.

The invention relates to newly identified human uridine kinase (UDK) CC polypeptides and polynucleotides and methods for producing such compositions by recombinant techniques. Also disclosed in the invention creamethods for utilising uridine kinase polypeptides and polynucleotides in diagnostic assays. The polynucleotides and polypeptides of the crinomaps be used as diagnostic reagents by detecting mutations in an associated gene. An array of oligonucleotide probes comprising the constructed to conduct efficient screening of genetic mutations, for constructed to conduct efficient screening of genetic mutations, for cample. Detection of abnormally decreased or increased levels of polypeptide or mRNA expression may also be used for diagnosing or determining susceptibility of a subject to a disease of the invention. CC The polynucleotide sequences of the invention can be used for chromosome contribution studies and tissue expression studies. The polypeptides of the invention or fragments thereof may be used as immunogens to produce antibution or fragments thereof may be used as immunogens to produce antibodies. These antibodies may be employed to isolate or identify clones expressing the polypeptide. The polypeptides and polynucleotides of the invention can be used as a car carcine or in gene therapy to treat diseases such as human ovarian cancer, human colon carcinomas, and immunological disorders. This polynucleotide sequence represents the DNP of a human uridine kinase of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antiparamier.

of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end complementary to a complementary to a polynucleotide which comprises a 3'-end sequence complementary to a compount of the sequence and an oligonucleotide comprises at least 15 nucleotides and the combination of comprises at least 15 nucleotides and the combination of the 5'-end sequence)3'-end sequence is selected from those defined in complementary. The primer sets can be used in antisense therapy and comprise are useful for synthesising polynucleotides, particularly full length cDNAs. The primers are also useful for the complementary full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH0316 to AAH13628 and CAAH13633 to AAH13672 represent human cDNAs sequences; AAAB92446 to CC AAB95893 represent human amino acid sequences; AAAB9246 to AAH13632 crepresent oligonucleotides, all of which are used in the exemplification of the present invention. full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination describes primer sets for synthesising 5602

Sequence 753 BP; 158 A; 196 C; 261 G; 135 T; 3 other;

P-PSDB;

New disease detection and treatment molecule (MDDT) polynucleotides and polypeptides, useful in diagnosing, studying, preventing or treating diseases associated with MDDT expression, e.g. autoimmune or disorders

Claim 1; Page 98; 129pp; English.

CC molecules for disease detection and treatment (MDDT), and the CC polynucleotide sequences (mddt) encoding them. The MDDT polypeptides CC may be used to screen for molecules that bind to, or are bound by the CC encoded polypeptides, and to develop a transcript image of a tissue or CC cell type. Probes comprising at least 20 nucleotides of the mddt CC polynucleotide may be used to assess the toxicity of a test compound. CC The MDDT polypeptides and mddt polynucleotides are useful in the CC diagnosis, study, prevention and treatment of diseases associated with CC the expression of molecules for disease detection and treatment. Such CC disorders include cell proliferative disorders (e.g. arteriosclerosis, CC cirrhosis, or cancers), and autoimmune/inflammatory disorders (c.g. asthma, Crohn's disease, or multiple sclerosis). The mddt CC polynucleotides may also be used as molecule markers, in microarrays, CC and in somatic or germline gene therapy. ABS51814 encode CC the MDDT proteins of the invention. The present invention relates to the isolation of novel human

Sequence 734 BP; 166 A; 181 C; 226 G; 154 T; 7 other;

                                                                                                                                                                                                                                                                                         CC Pharmaceutical compositions comprising an HTFS protein HTFS

CC agonist or antagonist, or genetic construct encoding an HTFS

CC agonist or antagonist, or genetic construct encoding an HTFS

CC with decreased or increased expression of functional HTFS. Disorders

CC which may be treated using such compositions include cell proliferative

CC disorders and immune disorders. For example, diseases which may be

CC treated include atherosclerosis, hepatitis, psoriasis, cancers (including

CC AIDS, Addison's disease, allergies, asthma, anaemia, cirrhosis, Crohn's

CC disease, atopic dermatitis, diabetes mellitus, multiple sclerosis,

CC thrombocytopenia, and ulcerative collitis. They may also be used to treat

CC complications of cancer, haemodialysis, extracorporeal circulation,

CC trauma and haematopoietic cancer, including lymphoma, leukaemia and

CC myeloma. Polymucleotides encoding HTFS proteins are useful for creating

CC trauma and haematopoietic secundary for disgnostic purposes and

CC occurring genomic sequences. HTFS, and its catalytic or immunogenic

CC drug screening techniques. Antibodies which specifically bind HTFS may be

CC drug screening techniques. Antibodies which specifically bind HTFS may be

CC drug screening techniques. On onlitors of HTFS. The present sequence

CC agonists, antagonists or inhibitors of HTFS. The present sequence

CC represents an HTFS protein-encoding cDNA of the invention.

The proteins play important roles in the regulation of cellular signalling and proliferation. The HTFS proteins are useful for screening compounds for their effectiveness as agonists or antagonists of transferase activity, or for compounds that specifically bind to an HTFS protein or which modulates the activity of an HTFS protein.
                                                                                                                                                                                                                                                                                         Sequence 1322 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human transferase polypeptides and polynucleotides useful for diagnosis, prevention and treatment of cell proliferative and system disorders and for identifying agonists and antagonists

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1402
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel nucleic acids and

The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic,

treating, prognosing or preventing various ovary and/or breast-related considers. Such conditions include ovarian cancer and breast cancer, and cometastatic tumours of ovarian or breast origin, reproductive system considers (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine considers, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and communities), immune disorders (e.g., congenital and acquired immune officiencies, autoimmune oophoritis, systemic lupus erythematosus), conditions (e.g., mastitis, oophoritis and conference (e.g., anaemia), cardiovascular disorders, congenital and acquired disorders (e.g., anaemia), cardiovascular disorders, canduratory disorders, neurological disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and condulate ovarian antigen expression or activity. The polynuclectides may for compounds which condulate ovarian antigen expression or activity. The polynuclectides may for individuals and in forensic analysis, and the colypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present convenion of the convenion of the convenion continues of the convenion 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher sukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention
                                                                                                                                                     insecticides, therapeutics and pharmaceutical drugs. discloses genomic DNA sequences (ABL16176-ABL30511), sequences (ABL01840-ABL16175) and the encoded protein
                                                                              The sequence data for this patent did not form specification, but was obtained in electronic f

Sequence 1, Application US/09896522

Patent No. US20020055161A1

GENERAL IMPORMATION:
APPLICANT: Glucksmann, Maria A.
TITLE OF INVENTION: 57658, A NOVEL HUMAN URIDINE KINASE AND TITLE OF INVENTION: USES THEREOF
FILE REFERENCE: 381552001700
CURRENT APPLICATION NUMBER: US/09/896,522
CURRENT FILING DATE: 2001-06-28
PRIOR APPLICATION NUMBER: 60/216,503
PRIOR APPLICATION NUMBER: 60/216,503
PRIOR FILING DATE: 2000-06-30
NUMBER OF SEQ ID NOS: 6
SOFTWARE: FASTSEQ for Windows Version 4.0
SEQ ID NO 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
